ABSTRACT

What has been sought with this investigation work, it has been basically to determine the existent relationship among science and technology and the activities linked to the national defense, being about settling down which the interaction mechanisms among both entities and how they are carried out inside a general politics of national security. For that effect, you have proceeded first to an exhibition of the existent different points of view around the topic, so much at political level as philosophical and economic. Finally, the conclusions of the investigation are exposed, directed to the achievement of a social state of security in front of external eventual aggressions, but without sacrificing the material conditions of existence hence.

Key words: national defense, national security.
